

# EAT BETTER

- 🦷 Encourages slower eating
- 🦷 Improves absorption of nutrients through better digestion
- 🦷 May help prevent coprophagy caused by poor assimilation of nutrients
- 🦷 Aids in weight management for overweight dogs

Many dogs have an unhealthy habit of eating too fast. They love to lap up all the food in a swift, sweeping motion and gobble down or “inhale” their food like a vacuum cleaner. This way, they end up swallowing everything without much chewing, possibly leading to indigestion. The Eat Better bowl solves many problems associated with fast pace eating.

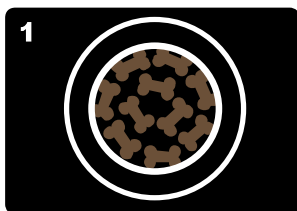

### Why Get the EAT BETTER Bowl

- "My dog gobbles his food"** - The wishbone design in the centre of the bowl has 3 apexes and connecting ridges, which serves as an obstruction to deter your dog from making a clean sweep of the food. The same obstruction also make it more difficult for dogs to get their muzzle too close to the base of the bowl, thus preventing them from “inhaling” their food.
- "My dog is overweight"** - Slower eating makes your dog feel fuller faster, thus avoiding instances of re-eating. As a result, this bowl can also be a useful weight management tool.
- "My dog is underweight"** - through moderating your dog’s eating pace, the bowl improves absorption of nutrients through better digestion. You dog will be healthier and have more energy. Note: owners who have this problem should seek professional help to identify the cause.
- "My dog vomits after eating"** - Dogs that eat too fast may regurgitate as a result. By slowing down the dog’s eating process to a healthy and moderate pace, this problem can be eradicated.

Eat Better bowls are constructed of high quality, durable, food grade, dishwasher safe K-resin plastic. The ergonomic and sturdy non-skid design make the bowl looks great for any home. Eat Better bowls are available in three vibrant colours (pink, blue and white) and three sizes (250, 500 and 1500ml) to suit your dog’s requirements.

# DRINK BETTER

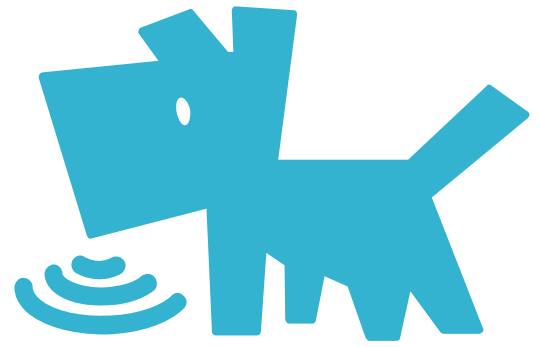

TM

**ALPHA PAW**  
LEADING THE LIFESTYLE

-  Prevents vomiting & minimize "choking" from drinking too fast
-  Keeps your dog's ears nice & dry
-  Minimizes mess from sloppy drinker
-  Reduces water staining of your dog's muzzle

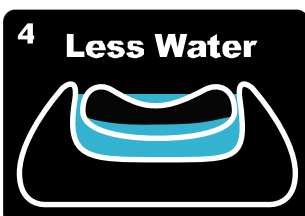

Many dogs drink water too fast and this often causes them to regurgitate the water after drinking. The Drink Better dog bowl is specially designed to slow down the time dogs take to drink. The bowl regulates the flow of water through an adjustable floating obstacle, encouraging dog to drink at a slower, healthier pace, and without soaking their ears and muzzles in the water.

### Why Get the Drink Better Bowl

-  **"My dog vomits after drinking"** - Many dogs drink their water too fast and this often causes them to regurgitate the water after drinking. This is a common problem with big and small dogs alike. With a unique floater in place, the Drink Better bowl alleviates this problem by moderating the amount of water accessible to your dog. Water flows out in small amount through the small "wishbone" design opening in the centre. Through this, the wet bowl helps to cultivate healthier drinking habits in your dog.
-  **"The drowning ears and dripping wet muzzle drive me nuts"** - If your dog is always getting his ears soaked or his muzzle dripping wet, after drinking from the conventional water bowl, the Drink Better bowl will solve your problem. Since water flows out in a controlled manner from the centre of the floater, the rest of the water is thus well covered under the floater, preventing direct contact with your dog's ears and muzzle. You can be assured he still looks like a million dollars after that few drinks.
-  **"The floor is always wet and messy"** - Keep your dog's ear dry and nice has another benefit: no more nightmares cleaning up the floor after each drinking session. Drooling and slobbering always leaves the area in a mess but you'll have none of this problem anymore.
-  **"My dog doesn't like his water bottle"** - Like us, dogs grow best in their comfortable environment. It is not in their nature to drink water from a nozzle and definitely something they are not used to. The Drink Better bowl leverages on the benefit of controlled water flow and improvises with a smart and radical design to suit the dog's natural drinking habits.
